NSFS working group documents

Pregnant Workers in Medical Radiation Practice – Guidelines and Recommendations in Norway

This document has been prepared by the NSFS working group on medical radiation in Norway and provides a compilation of experiences, dose assessments, legislation, and international evidence regarding pregnant and breastfeeding workers who may be exposed to ionizing radiation or MRI. Its purpose is to support radiation protection advisers, radiation safety officers, managers, and other stakeholders in making consistent, proportionate, and evidence-based decisions. The available evidence indicates that pregnant workers can generally continue their professional duties safely, provided that applicable dose limits and appropriate radiation protection measures are maintained.

The document is in Norwegian.

Pregnant workers – Medical Radiation Practice
